

Dedicated tech innovator with 9+ years of experience in Mobile Development (Flutter/Android) and a proven track record of driving core app architecture at fast-growing startups. Highly proficient in leveraging cutting-edge Autonomous Software Engineering (ASE) workflows to rapidly prototype full-cycle web and backend solutions. Combines deep mobile expertise with a modern stack (Next.js, NestJS, PostgreSQL) orchestrated via advanced AI agents to deliver scalable products efficiently.

WORK EXPERIENCE

Senior Mobile Engineer Dec 2021 – Present

Care Health

- Spearheaded the end-to-end mobile development of core GP Teleconsultation, eQueue management, health records, medical claims, and a medicine marketplace utilizing Flutter, driving seamless healthcare accessibility for thousands of patients.
- Architected and implemented reactive state management using Riverpod and GetX to handle real-time doctor queue updates and minimize app latency.
- Integrated Health SDKs (iOS HealthKit, Android Health Connect, and Garmin) to enable robust, automated tracking and synchronization of patient vitals within the app.
- Engineered secure, low-latency end-to-end video consultation features powered by the Twilio Video SDK to guarantee stable doctor-patient communication.
- Automated the CI/CD pipeline via Codemagic, drastically reducing release cycles and streamlining rapid deployments to the Apple App Store, Google Play Store, and Huawei AppGallery.

Sole Mobile Developer Nov 2019 – Nov 2021

Rovo

- Served as the Sole Mobile Developer for a well-funded startup, managing the end-to-end development, architecture design, and deployment of the cross-platform application.
- Collaborated closely with the CTO on technical architecture and rigorous code reviews, ensuring high-quality, maintainable, and scalable code.
- Partnered with UI/UX Designers to transform complex wireframes into seamless, high-fidelity interfaces for core social, booking, and marketplace features.
- Engineered a comprehensive e-commerce marketplace within the app, allowing users to book venues, hire coaches, and purchase sports packages securely.

Flutter Developer Aug 2018 – Oct 2019

UpUp Technologies

- Early adopter of Flutter, successfully migrating and shipping the core HR Management & OKR mobile application from Beta to the first Stable version (1.0).

TECHNICAL SKILLS

Mobile Engineering

Flutter, Dart, Android Native (Java/Kotlin), App Store Connect, Google Play Console, Huawei AppGallery.

Architecture & State

Clean Architecture, Riverpod, GetX, BLoC, Provider, Responsive UI Design.

AI & Infrastructure

Next.js, NestJS, PostgreSQL, DigitalOcean VPS, Docker, Cloudflare, Hermes Agent, GitNexus, Playwright.

CORE COMPETENCIES

Product Mindset	★★★★★
Problem-Solving	★★★★☆
Technical Leadership	★★★★☆
Cross-functional Co.	★★★★☆
Communication	★★★★☆

EDUCATION

B.S. in Computer Science

Ton Đức Thắng University

Apr 2013 – Apr 2017

- Implemented location-tracking features using Mapbox SDK and built a real-time messaging system via Firebase Cloud Messaging & Chat.
- Optimized and managed the entire app deployment and publishing pipeline on both Google Play Store and Apple App Store.

Android Developer

Jan 2017 – Jul 2018

TMA Solutions

- Collaborated with the Team Lead to develop features and maintain a Java-based news application outsourced for the Japanese market.
- Promoted to full-time engineer following a successful 3-month internship due to rapid technical adaptation and code contribution.

PERSONAL PROJECTS

So Giao Dan (Catholic Community Platform)

2025 - Present

AI-Assisted Product Engineer

- Orchestrated advanced ASE agents (Hermes Agent, GitNexus) and Playwright to prototype, build, and test a multi-platform community app.
- Architected a robust full-stack web ecosystem utilizing Next.js for the frontend, NestJS for the backend, and PostgreSQL as the core database.
- Deployed and managed cloud infrastructure on a DigitalOcean VPS, utilizing automated workflows to ensure high platform availability and secure data sync.

Git Trending & Analytics Engine (Digital Hub)

2026 - Present

Infrastructure & System Lab

- Engineered an automated data pipeline to aggregate, save, and analyze daily trending open-source repositories via GitHub API, leveraging Playwright for end-to-end testing.
- Designed and self-hosted the production environment on a Mac Mini using Docker and Cloudflare for secure reverse-proxy and deployment testing.
- Leveraged an AI-powered development loop to build, optimize, and continuously deploy a modern, responsive web portfolio.
- Implemented automated continuous deployment pipelines directly to the self-hosted homelab infrastructure to rapidly test and iterate on new features.
